

## CLOUDVMS Visitor Management System

### Product Description

CloudVMS (Visitor Management System) is designed to streamline and digitize the process of registering, tracking, and managing visitors to a location. It operates on cloud-based servers, which means the data and functionality are accessible over the internet. It offers a modern and efficient approach to visitor registration and access control, replacing traditional manual sign-in processes. They are particularly useful for enhancing security and providing a professional and convenient experience for both visitors and hosts.
